

11:30 – 13.00pm

SPOTLIGHT ON AFRICA

Energy Transition

- Addressing carbon in an African context: Is capital is being earmarked towards carbon reduction in a continent where this is not needed? Do the capital markets understand the transition story for Africa?
- How can we balance access to energy with transition timeframes?
- How are the gas markets evolving and what scope is there for infrastructure development? What differentiation is there between gas projects and what is the role of gas to power?
- Managing the expectation of delivering scale on energy projects when the infrastructure is not ready for it
- Examining all the letters in ESG; balancing the S and the E

Finance and Investment

- Who is going to invest in Africa? What will access to finance & capital raising look like in 2021? Is Africa still a viable option for investors?
- What are lenders looking for and what alternative sources of funding are available?
- Comparing access to financing at different phases of a project lifecycle
- What will be the role of PE moving forwards?
- Is there a differentiation when it comes to oil and gas project financing?

Exploration

- Where are the most exciting regional hotspots, drilling activities and high-potential gas discoveries?

Government

- What can host governments do to encourage exploration and investment in their countries
- Terms and pace in the current market – who has amended and who hasn't?
