Commodity

**BUILDING  
FOUNDATIONS**

# Accelerating development

Commodities are the key drivers of a country's economy. They fuel growth by being the raw materials of national development.

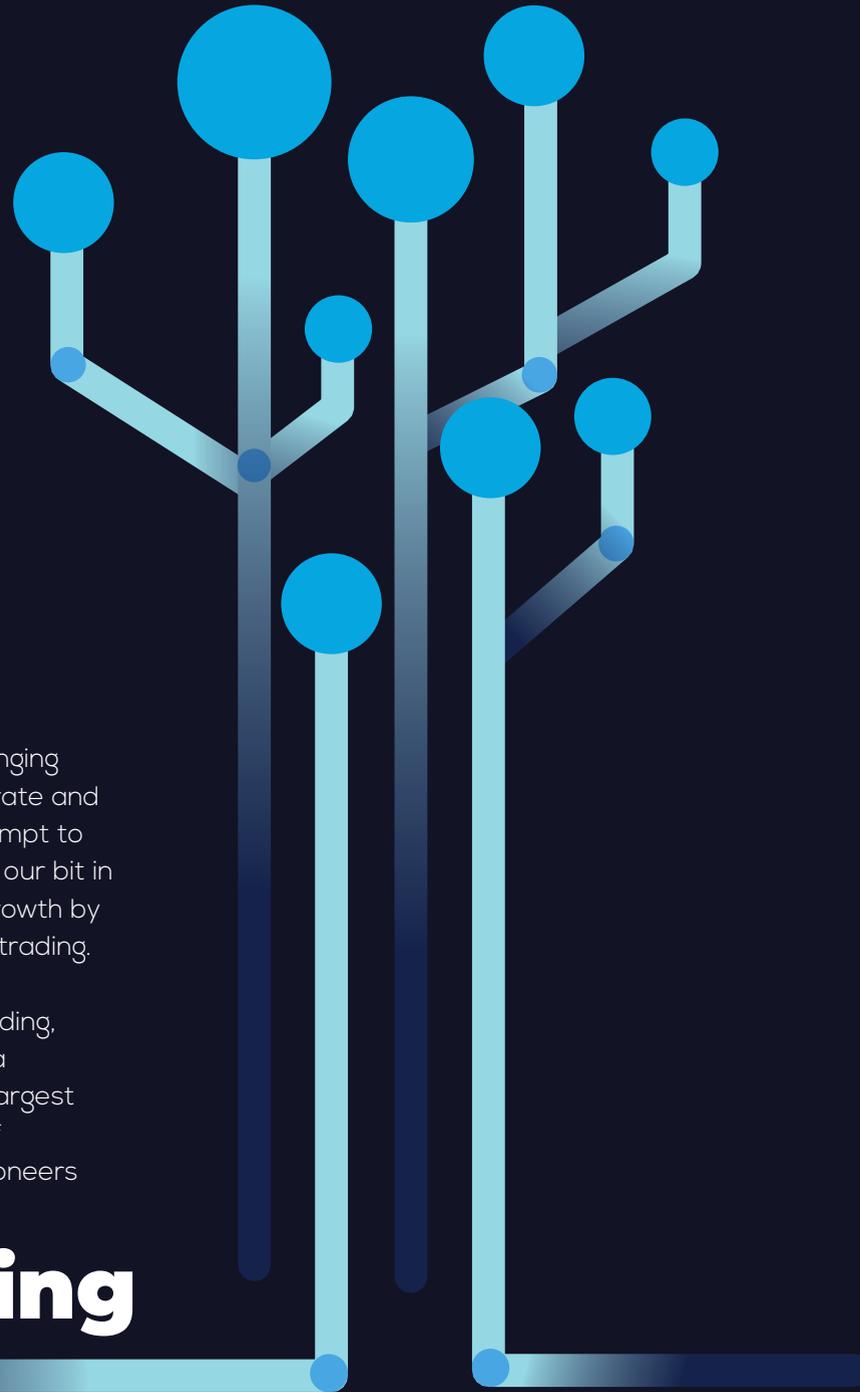

These resources are the essential ingredients of our everyday lives – forming the foundation of infrastructure, roads, transport and our lifestyle. Over the years, **.Kreate** has grown to become a major trader of commodities with a strong client base established all over the world.

The demand for raw materials within every industry is incrementally growing. Commodities lie at the forefront of this development. They are the fundamental unit of every infrastructure while being the building blocks of a progressive future.

At a critical juncture of industrial progression, raw materials contribute to economic growth to a large extent. Commodity is not just a product anymore. It is a service customised and carefully crafted for the ones who understand the value of strong foundations of every bigger construct.

We physically source commodities and products from an associate global supplier base and sell them to customers all over the world. This translates into transporting commodities by sea, rail and truck, storing them, processing them, where required, and delivering them within time, assuring quality and delivering specifications that our customers need.

We at **.Kreate** are aware of the changing global landscape. We support, celebrate and enable the growth of those who attempt to become leaders. And hence, we play our bit in their progress; we accelerate their growth by leading from the front in commodity trading.

Our growing footprint in resource trading, excellent track record in quality and a consistent reputation as one of the largest traders and importers of a variety of commodities makes us one of the pioneers in this sector.

# Channelising growth

**Creating  
strong  
bases**

## **Trading of minerals**

We aspire to become one of the global market leaders in mineral and metal trading with the help of our unswerving and channelised efforts towards operational excellence. By keeping quality at the forefront of everything, we intend to remain customer centric at every step of our way.

The Indian coal industry aims to reach the 1.5 billion tonne (BT) mark by 2020. However, dependence on coal imports, which is almost 25% of its coal demand, shall continue unabated.

We have, therefore, set our sights on coal for the long-term and established direct contact with mine owners/partners and mandate holders to assure seamless supply from accredited suppliers in South Africa and Indonesia. Should it be so required, through our logistically well-equipped system we can ensure pan India distribution of coal at prices that are highly affordable.

Our relationships with our clients are way beyond mere transactions. We build credibility and trust with the quality of product that we consistently offer and constantly support them in their journey.

Our range of coal includes anthracite acquired directly from mines in Russia and USA and thermal coke imported from Indonesia and South Africa. Anthracite coal is a high quality, low cost carbon substitute in various industrial applications. We are also into trading of petcoke from Saudi Arabia and USA, metcoke from USA and China.

**Various quality and sizes available with us are:**

**5300 GAD** from East Kalimantan

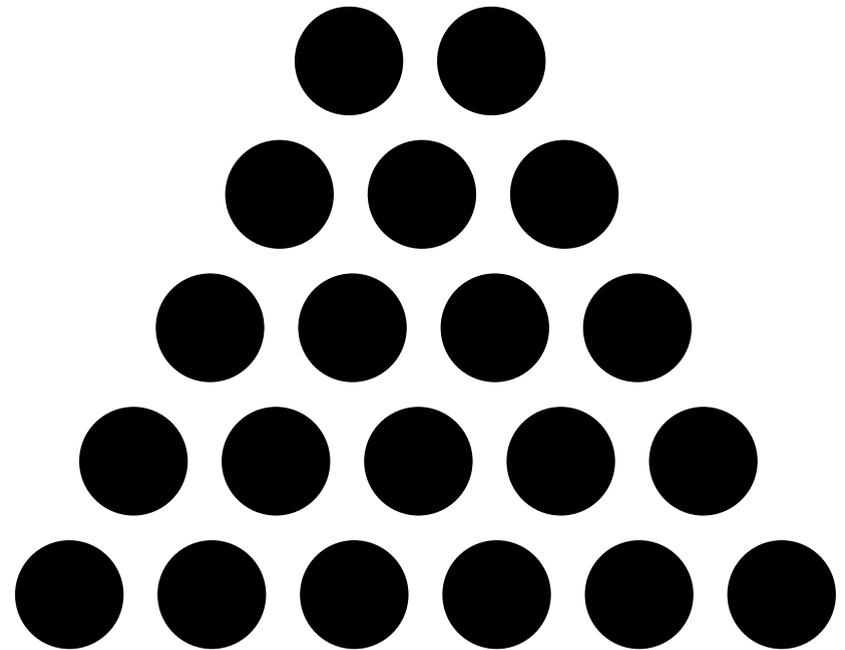

**5000 GAR** from East Kalimantan

**6500 GAR** from South Kalimantan

**RBI** coal from South Africa

**GCV** 6000 Kcal/Kg from South Africa

## Coal

## **Fertilizers**

We understand the importance and the essential role of fertilizers in helping us complement our core business of agro commodity trading. We are focused on delivering targeted and customised solutions to our partners and customers alike, thereby, making us one of the most trustworthy and reliable partners in fertilizer trading business. By providing ease and accessibility, we develop long-term business relationships with our clients.

We specialise in fertilizers such as ammonium sulphate (caprolactam grade), sulphur, micro-nutrients, DAP, urea, NPK, MAP and MOP, granular double superphosphate, mono-ammonium phosphate, liquid ammonia, methanol and others.

## Oil & gases

The oil and gas sector is among the six core industries in India and plays a major role in influencing decision making for all the other important sections of the economy.

We understand this industry and act as a major player here. In order to have end-to-end control, we have entered into a perpetual production contract with a refinery to produce white spirit, base oil and others, exclusively for us. We also trade Diesel D2 of various compositions, JP54, Condensate and Crude oil. LNG and LPG are the front runners in our list of specialised trading, where we have direct access to consignments.

# Ensuring successes

Our role is to ensure that we extract and deliver these energy resources profitably and in environmentally and socially compatible ways. We seek to create a benchmark of high quality performance, consolidating our long-term position in the competitive environment.

## Driving lives

### Agro commodities

We enable the everyday lives of our customers by providing reliable food materials sourced from the agro industry.

Our agro products are focused on high quality. The agro commodities we trade include grains, rice, corns, pulses, sunflower oil, fruits and other vegetables.

We trade in the following grades of rice:

- (i) 1121 Cream Sella
- (ii) PR-11 Steam
- (iii) Sona Masoori

We trade in the following varieties of pulses:

- (i) Red Lentil
- (ii) Yellow Lentil
- (iii) Green Lentil
- (iv) Chickpeas

# Cementing the way forward

With trust, credibility and quality infused within our DNA, we offer products that truly impact the lives of those who come in contact with them. Our raw materials and resources acquired from trusted networks foster growth and prosperity among our clients. With the trading of authentic commodities and by building the foundation of every industry we work with, we make sure to live by our values and create a more efficient tomorrow for ourselves and for everybody we work with.

Our dedicated research team leading the process of acquiring resources is technically sound and innovative in their approach. They ensure that the quality of the products remain high while meeting the internationally set grades and specifications.

We value our clients' requirements and remain focused on fulfilling them. That is why we never dare to stop at average, attempt to provide the best and stand as leaders of this ever evolving industry.
